Surround Toothbrush Testimonials

P. Reamer - Love it! Does the job better and faster than a regular tooth-brush wish I had this toothbrush when my daughter started teething; it makes brushing so much easier. My two year old would not let me brush her teeth for more than a minute. But this toothbrush has a really compact head that slides over all the surfaces of her teeth so she doesn't mind if I take a little longer. The best part is knowing I'm not missing anything and am brushing all the tooth surfaces with each stroke.

J Sachs This toothbrush was recommended to me by our paediatric dentist. The few weeks before we had seen the dentist, my son, was giving me big fits about brushing his teeth and he would not sit still long enough for me to really clean them well. We received these in the mail and immediately put one to use. It cuts down on overall time brushing as it cleans all three tooth surfaces at the same time. My son loves it and he will now sit still long enough to get his teeth brushed. Love this product. I just wish I had known about them when he was younger.

C Caskey These are amazing. My son has some sensory issues and doesn't like anything imposed, but this helps with brushing because we cover more ground quicker. Must have for toddlers...

L Gaddie - Our toddler gets impatient when we brush his teeth. These get the job done very quickly by covering all surfaces of the teeth in a few quick strokes. Now we can brush his teeth thoroughly before he starts grabbing the brush to try to do it himself. They also hold up well when he does his own brushing, which currently consists of gnawing on the brush.

M Kolvites -We purchased these for our 2 year after going through a number of cheap toothbrushes that he quickly worn out from chewing on the bristles. We have been using these for about 2 months now (and still on our first brush) -- the quality of these brushes is much better than we've had before -- highly recommended.

S Jensen -These are utilized by our disabled customers and their dentist has been very impressed with the improved cleaning and overall status of their teeth.

S Carr - Great tool for disabled adult son who is tactically sensitive and makes the job much easier than a normal toothbrush; he is able to be more self-sufficient with hygiene skills

S Flake -My son has sensory integration disorder that makes tooth brushing difficult for him. He constantly gags and bites on his toothbrush. His paediatric dentist recommended this toothbrush, and it really works! It makes brushing his teeth much easier. Because the bristles wrap around his tooth, we are able to get all surfaces of his teeth clean. I definitely recommend this toothbrush! It has made a huge difference for my son!

D Kilgore - I am amazed at how much cleaner they get my son's teeth. Even his dentist was impressed!

R Vega - One of the best brushes I've ever seen, especially for kids and people with special needs. I highly recommend.

J Kieffer - I have a son who has a brain injury and cannot brush his own teeth. This brush is very helpful for me to do it. It should be more advertised for those who my need help brushing teeth of love ones who can or cannot. I have given them to a few people in the nursing home my son is in. They all think it was great. Thank you to the person who invented this helpful tool.

V Foley – I have an Autistic son and it's amazing. I posted on Facebook, to see if anyone knew of a product like this, or failing that a paediatric dental professional who would think about creating one. I am thrilled that you have this product available.

K Clark - bought these brushes, both children and adult ones for my whole family and loved them.

J Horton - My son's dentist and the Children's Hospital has given us one to try and I have had comments on how good his teeth are looking and the dentist is really pleased with the results.

T McFarland - The brush has made a huge difference to the way my son cleans his teeth, and his dental hygiene.
